

Providing Industrial, Productivity Solutions for Assembly, Custom Lifting, Material Removal and MRO.

Lower Torque Assembly Solutions

Whether looking for a new way to improve your existing assembly process or building a brand-new assembly line, AEHH offers solutions for your torque control and other assembly tooling needs. Products like Kolver USA's KDUCER offers cost-effective transducer-controlled tools with all the MES integration you need for low torque assembly. If you have pneumatic torque tool needs, Torque Tec (shown below) offers a full line of pneumatic screwdrivers, impulse tools and nut runners that provides great cost of ownership verse well know brands like Atlas Copco and Cleco. New low torque battery tools by DUROFIX provide ultimate flexibility and transducer-controlled solutions for under \$2,000!

In addition to torque control tooling, AEHH provides a variety of assembly solutions like bits / sockets, torque arms, tool balancers, riveting tools, presses, visual inspection systems and turnkey work benches, etc. Many of our solutions are also compatible with MES Systems like Pin Point through Open Protocol and other communication platforms.

Assembly Line Building Services

Pictured left is a recent project where AEHH teamed up with a major electrical component manufacturer to provide and install *Treston* work benches, *STRONGHOLD carts, PE Air Pipe, TORQ TEC* air pulse tools / screwdrivers and *Acradyne transducer-controlled low reaction pulse tools*. This customer had AEHH build the work benches offsite and delivered on site ready to go with the air pipe installed on the bench. By presetting and labeling the torque tools, we were able to quickly locate and set tools in the correct stations. AEHH installed the COILHOSE and CEJN air fittings on site, allowing our customer to focus on material flow and leave the line set up to AEHH with minimal interaction.

Contact us today to discuss your new work area!

For pricing on these solutions or to discuss your application further, contact us at sales@aehh.net or by phone at 262-798-0535.
