

Medium and High Torque Assembly Solutions

Providing ergonomic solutions around high torque control tooling has been the focus of manufacturers over the last few years. At AEHH, we have stayed in front of and helped develop these solutions with our network, to provide low reaction, high torque output shut off tools. The latest development of transducer controlled impulsing tools (battery, pneumatic and corded electric) have made it easier, faster, and safer than ever to produce high quality, reliable products.

When your job requires less critical control or an economical solution, AEHH still sells and supports technology that has been around for decades like air impulse tools, clutch shut off tools and corded DC Electric nut runners in torque arms or swing bar tools for high torque needs. Brands like Acradyne, Durofix, Ingersoll Rand and Torq Tec have provided serious cost savings with their quality products. At AEHH, we offer these solutions and allow you to make the best decision based on your specific application.

In addition to torque control tooling, AEHH provides solutions for riveting, press fit installation, visual inspections and many other processes control needs. Many of our solutions are also compatible to MES Systems like Pin Point through Open Protocol and other communication platforms.

For pricing on these solutions or to discuss your application further, contact us at sales@aehh.net or by phone at 262-798-0535.
